Hello,

Thank you for reviewing my application for the Associate ScrumMaster position. After reviewing the requirements, I feel that I could be a good fit at WellSky.

My goal in my career is to ensure that my customers, whether internal or external, receive the best product possible. I am a leader in testing by inspiring other team members and project stakeholders to be innovative while making something phenomenal. I experienced this daily at Apple as a Quality Assurance Engineer. While there, I interacted with customers through bug and feedback reports, reported the bugs back to the engineers, and helped establish deadlines for when those bugs should be fixed.

More recently as a Quality Assurance Engineer II for SurveyMonkey, I coordinated release testing between developers and QA staff, and the organization at large. But more than that I was the very first user for many different projects. The feedback I provided was critical to maintaining both software quality, and helping the engineers meet the requirements set forth by the product team.

My resume is attached with a detailed listing of my past experience, results, and accomplishments. I am an employee who has a proven track record in QA testing and product development, which I'm sure, will contribute to the success of the team. Please do not hesitate to contact me at your earliest convenience to discuss how my qualifications can help WellSky.

Sincerely,

Matt Troutman
