Hello,

Thank you for reviewing my application for the QA Engineer position. After reviewing the requirements I feel that I could be a good fit at Apple.

My passion is software quality, and I have a keen eye for making sure that the user experience and functionality of the software I'm testing is top-notch. I am a leader in testing by inspiring other QA Engineers and project stakeholders to be innovative while making something great.

In my previous time at Apple, I worked on the macOS Team and was the manual QA tester for for the Contacts app. I learned a great deal about QA and the software development lifecycle. I triaged incoming bugs, as well as submitted the team's code to the program office. I consider my time at Apple one of the most challenging, but rewarding times in my career as it was the stepping off point.

I consider the ability to use the product I'm helping develop the pinnacle. While I was employed at mmhmm, I was not only Senior QA engineer for the product, but also was tasked with using it to create the "All Hands" company-wide meeting videos that were produced weekly.

While at SurveyMonkey, I coordinated release testing between developers and QA staff. I gained a reputation as a QA leader who effectively balanced competing priorities in technical environments while partnering with a wide variety of team members and ensuring the planning, design, and implementation of QA testing. I developed project management and quality assurance skills, using strong organizational skills to develop test plans, assisted in the development of automated testing, and prevented bugs from being released.

My resume is attached with a detailed listing of my past experience, results, and accomplishments. I am an employee who has a proven track record in QA testing and product development, and I would love to bring these back to Apple.

Sincerely,
Matt Troutman
